DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after a notice of abandonment. Applicant's submission filed on 8/26/04 with a petition to revive the application has been entered. The petition was granted and entered by the petitions office on 6/6/05. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, or waived by the petition office; and the application has been forwarded to the examiner on 10/18/05 for examination.

Allowable Subject Matter

2. Claims 1-30 are allowed.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance:

Regarding claims 1, 16, and 28, the prior art of record to Miyahura and Laubach fails to either alone or combine to teach or suggest a system and its corresponding method and instructions for controlling at least two audio/video devices to render to desired content by constructing a filter graph of the at least two audio/video devices as a function of a connection topology of the at least two audio/video devices and the desired content as well as controlling the at least two audio/video devices via the filter graph to render the desired content on one of the at least two audio/video devices. A filter graph is a software object that performs certain tasks required to process multimedia, and both Miyahura and Laubach are eventually silent on this subject matter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Shaw et al and Frink et al (PTO 892 attached) disclose some systems related have filter graphs for objects between processing components, but not between audio and video devices.
